

Role Description: Tech Operations Principal– Vortex Capital Partners

Vortex Capital Partners is a private equity company based in Amsterdam. We are active and successful investors in lower mid-market companies. Our focus is on investment in IT and software companies or companies where IT is a key enabler for the business to strategically differentiate itself from the competition. Since a central theme of our investments is IT, we are seeking to strengthen our staff by adding strong IT skills with this new position of Operations Manager.

The Operations Manager will be actively involved in all operational activities in our portfolio companies. Vortex works as a partner with the companies in our portfolio. This role will be working with management and other staff of these companies. The Operations Manager will be involved in all phases of the investment lifecycle in a company - from performing technical due diligence of a potential target to preparing the operations team of the company for sale and exit. The profile we are seeking will have a hands-on experience and competence in software and IT together with commercial and management skills and experience.

Primary Responsibilities

- Participate in and contribute to incoming deal pipeline, identifying interesting companies and market segments. Discussing pros and cons from a technical and operational standpoint of potential investment targets.
- Performing technical (IT) due diligence of companies.
- Collaborating with Vortex deal teams to strengthen operations in portfolio companies; identifying areas of risk and potential solutions for the same.
- Participating in the operational project reporting of portfolio companies and assisting them, hands-on, in their projects where needed.
- Advising portfolio companies' technical and operational teams on all matters of process, technology operational and staffing improvement.
- Managing and running educative seminars for product managers, heads of development and heads of customer support, of the portfolio companies.
- Assisting in, and guiding, market surveys conducted by Vortex.
- Recruiting and managing technical team members of the Vortex team.
- Assist in the recruitment of technical and operational leaders for our portfolio companies
- Preparing portfolio companies for divestment from the Vortex portfolio.
- Generally contributing to internal discussions on investments, internal Vortex processes, and social activities in Vortex. Specifically: advising the investment committee and the investment teams of Vortex of technological and operational elements for new and existing investments of Vortex.
- Assist the portfolio companies with the realization of their AI strategy
- Assist with the realization of nearshoring and offshoring capabilities at our portfolio companies.

Profile and experience

Education

Bachelor's or Master's degree in Computer Science, Information Systems. Additional degree in business or finance is an advantage.

Experience

- Background in software engineering, architecture and experience with managing tech teams.
- Experience as a project/program manager and managing them.
- 7-15 -years of experience in management of IT teams.

Skills

- Leadership skills with the ability to develop and communicate an IT vision that inspires and motivates IT and business staff and aligns to the business strategy.
- -Ability to instill confidence in the business and demonstrate the business value of IT.
- Effective influencing and negotiation skills in an environment where resources may not be in direct control of this role.
- Strong business acumen with excellent analytical, strategic conceptual thinking, strategic planning and execution skills.
- Good understanding of current and emerging technologies and how companies are employing them to drive digital business and how they may be applied to a given company to drive digital business.
- Demonstrated ability to develop and execute a strategic people plan that ensures that the right people are in the right roles at the right time and that employees are highly engaged and satisfied.
- Good understanding and experience in the realization of AI strategies and nearshoring facilities.
- Ability to identify and leverage resources internally and externally to a given company to enhance capabilities that drive digital business.
- -Ability to drive organizational change and build capabilities that effectively balance the needs between continuously exploiting capabilities to optimize operational efficiency and delivering innovative and agile IT solutions to enable the business to explore digital business opportunities.
- Excellent verbal and written communication skills, including the ability to explain digital concepts and technologies to business leaders, and business concepts to the IT workforce.
- Good team player.
